

Nishant Agarwal

B.Tech CSE | CGPA 8.86/10 | Software Engineering Intern — Backend, APIs, systems
+91 7900654124 | nishantx.in | agarwalnishant812@gmail.com | [GitHub](#) | [LinkedIn](#)

EDUCATION

Bennett University

B.Tech Computer Science Engineering; CGPA: **8.86/10**

Greater Noida, India

Oct 2024 – Jul 2028

EXPERIENCE

Backend Developer Intern

Mar 2026 – Jul 2026

Digital South Trust

India (Remote)

- Shipped production REST APIs for a News Portal: Zod validation, structured errors, Express.js routing, and release-time debugging of failing request paths.
- Built backend modules and workflows for Crypto Suraksha; owned features from requirements through testing and production handoff.
- Hardened error handling so client failures returned consistent HTTP status codes instead of opaque 500s.

PROJECTS

Krydo | TypeScript, Node.js, Express, Firestore | [GitHub](#) | [Live](#)

Feb 2026 – Apr 2026

- Designed a hybrid backend: append-only hashes as source of truth, Firestore as the low-latency query layer, JWT auth, Zod on every route, rate limiting, Helmet/CORS, health/readiness probes.
- 154 Vitest unit tests** and GitHub Actions (typecheck + test) on Node 20; 8 API route modules, pagination middleware, shareable verification URLs.

CivicSense | TypeScript, Node.js, PostgreSQL (Supabase), React | [GitHub](#) | [Live](#)

Dec 2025 – Feb 2026

- Built REST APIs with JWT auth, role-based access, and a 3-step report lifecycle; hybrid storage (Postgres for queries, integrity layer for auditability); Gemini-assisted triage.
- 12-page citizen/admin/org portals with distinct authorization paths end-to-end.

BlockForge (LabEval) | Node.js, React, content-addressed storage | [GitHub](#) | [Live](#)

Sep 2025 – Jan 2026

- Split hot data from cold blobs (~92% storage-cost cut vs inlining files); RBAC for student/grader roles; Gemini grading pipeline; research paper accepted at NetCryp 2026.

OPEN SOURCE (MERGED)

ClickHouse #114003 | Hardhat #8464 | viem #4903

- ClickHouse: fixed Keeper `writeAt` path that could surface `CORRUPTED_DATA` on startup. Hardhat: config resolution prefers `process.env` over plugin hooks, with unit tests. viem: `_types package.json` module marker for TypeScript NodeNext.

Mastra #20487/#20518 | Hyperlane #9181 | WalletConnect #7302 | FilOzone pdp#287+svc#566

- Mastra: core workflow/tool fixes (never execute declined tools; reuse nested snapshots). Hyperlane: fail-safe indexer decode to avoid panics on malformed messages. WalletConnect: EventEmitter TypeScript annotations. FilOzone: piece-removal event + ABI wiring across two repos.

ACHIEVEMENTS

- 10 merged PRs in production repos (ClickHouse, Hardhat, viem, Mastra, Hyperlane, WalletConnect, FilOzone, hardhat-website).
- Finalist, LNMHacks 8.0 (Top 30 / 150+ teams); Top 20, Tech Triad, IIT Kharagpur (Kshitij 2026).

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, C++, Solidity

Backend: Node.js, Express.js, REST APIs, Zod validation, JWT, rate limiting, error handling, CI (GitHub Actions), Vitest

Data: PostgreSQL (Supabase), Firestore; hybrid hot-path vs integrity-store design

Frontend: React, Vite, Tailwind CSS

CS: Data Structures & Algorithms, OOP, DBMS, distributed systems fundamentals

Tools: Git, GitHub Actions, Render, Vercel
