EDUCATION

Bennett University

B.Tech Computer Science Engineering; CGPA: **8.86/10**

Greater Noida, India

Oct 2024 – Jul 2028

EXPERIENCE

Backend Intern

Mar 2026 – Jul 2026

Digital South Trust — Web3 Blockchain Developer Intern

India

- Shipped production REST APIs for a News Portal: Zod validation, structured errors, Express.js routing, and release-time debugging of failing request paths.
- Built backend modules and transaction workflows for Crypto Suraksha; owned features from requirements through testing and production handoff.
- Hardened error handling before release so client failures returned consistent status codes instead of opaque 500s.

PROJECTS

Krydo | TypeScript, Node.js, Express, Firestore | [GitHub](#) | [Live](#)

Feb 2026 – Apr 2026

- Designed a hybrid architecture: append-only hashes as source of truth, Firestore as the low-latency query layer, JWT/SIWE auth, Zod on every route, rate limiting, Helmet/CORS, health/readiness probes.
- 154 Vitest unit tests and GitHub Actions (typecheck + test) on Node 20; 8 API route modules, pagination middleware, and shareable verification URLs.

BlockForge (LabEval) | Node.js, React, content-addressed storage | [GitHub](#) | [Live](#)

Sep 2025 – Jan 2026

- Split hot data from cold blobs: files on IPFS, only content IDs in the system of record (~92% storage-cost cut vs inlining files); RBAC for student/grader roles; Gemini-assisted grading pipeline.
- End-to-end product: REST + React UI + role-gated flows; research paper accepted at NetCrypt 2026.

CivicSense | TypeScript, Supabase (PostgreSQL), REST | [GitHub](#) | [Live](#)

Dec 2025 – Feb 2026

- Modeled a 3-step report lifecycle with hybrid storage (Postgres for queries, chain for integrity), Gemini triage, and 12-page citizen/admin/org portals with distinct authorization paths.

OPEN SOURCE (MERGED)

NomicFoundation/hardhat #8464 | hyperlane-xyz #9181 | wevm/viem #4903

- Hardhat: config resolution prefers `process.env` over plugin hooks, with unit tests. Hyperlane: fail-safe decode of malformed multi-chain messages (no process panic). viem: ESM `_types` packaging for TypeScript NodeNext.

mastra-ai/mastra #20487/#20518 | FilOzone pdp#287+svc#566 | WalletConnect #7302

- Mastra: never execute user-declared tools; reuse nested snapshots. FilOzone: cross-repo event + ABI wiring. WalletConnect: EventEmitter TypeScript annotations.

ACHIEVEMENTS

- 9 merged PRs in production repos (Hardhat, Hyperlane, FilOzone, Mastra, WalletConnect, viem).
- Finalist, LNMHacks 8.0 (Top 30 / 150+ teams); Top 20, Tech Triad, IIT Kharagpur (Kshitij 2026).

TECHNICAL SKILLS

Languages: C++, TypeScript, JavaScript, Python, SQL, Solidity

DSA / CS: Data Structures & Algorithms, OOP, DBMS, REST, client-server design, distributed systems fundamentals

Backend: Node.js, Express.js, REST APIs, Zod validation, JWT, rate limiting, CI (GitHub Actions), Vitest

Data: PostgreSQL (Supabase), Firestore; hybrid hot-path vs integrity-store design

Frontend: React, Vite, Tailwind CSS

Tools: Git, GitHub Actions
